

## Metal Prints

Metal prints are created with the highest-quality brushed aluminium. It provides a stunning luminous finish to the images. The brushed texture on the aluminium adds extra dimension to the images and creates a unique form of art and an eye-catching piece. No white ink or white under-base is used which allows you to see the raw aluminium and texture showing through, giving the photos a truly futuristic, unique and modern appearance. In black and white prints, the white areas will appear silver as the aluminium comes through. Colour images with lighter colours will take on a radiant metallic appearance, making images stand out very stunningly.

Frameless prints has a supporting back frame for hanging purposes. Four additional frames can be selected which comes in black, white, gold or pewter (20mm wide and ready to hang). No glass is added to metal prints.
